MANAGED INVENTORY**
a Jamestown Container Solution

Improve the productivity and efficiency of your business with eVMI

Jamestown Container's eVMI program is a web-based, just-in-time industrial packaging solution designed to significantly improve the productivity and efficiency of your business.

Managing your inventory with eVMI allows you to prioritize your valuable time in more profitable ways. eVMI adjusts for variances in demand, recognizing usage swings and demand needs immediately. The results: fewer emergency orders, delayed deliveries, and damaged, outdated inventory stocks. eVMI allows you to maximize the use of both your warehouse space and your cash flow.

Eliminate data entry errors and optimize your workforce

With our eVMI solution, data entry errors are virtually eliminated, allowing you to reallocate valuable employees to other aspects of your business. The customer experience is greatly enhanced as stock-outs and expediting is drastically reduced – your inventory will be automatically set to support demand in even the most unpredictable industries.

Set up eVMI in just 5 easy steps:

Maintaining inventory is easy with eVMI.

Once eVMI is set up, customers scan barcodes and stock is replenished as it's depleted.

Specifications such as minimum

and maximum usage levels, buffer sizes and lead times are determined in advance. Reports, which include order status and scheduled deliveries, are provided regularly. Because eVMI is an online solution, there is no software to install and no hardware to purchase. The only requirement is a computer with Internet access.

What others are saying about the ease of eVMI:

"We really love the time Jamestown Container's eVMI system saves with our carton inventory management. We no longer have to physically go to the warehouse to do inventory and the space made available in our facility was much needed."

Douglas Przybyla
Receiving Manager, Alfred Publishing Co., Inc.

"Jamestown Container Companies' eVMI program is instrumental in streamlining our supply chain."

Erica Wright
VP of Finance, Finger Lakes Extrusion Inc.

"The EVMI program is a fantastic tool. Once you have established your minimum and maximum inventory levels, you are good to go. Just scan your bar codes off the 'skid tags' and you are done. I then can expect a shipment if I have reached my minimum inventory level. It's that easy. It takes all the guess work out of should I order or not!"

Tom Jenior
Traffic Manager, Angstrom Graphics
